# Presentation Overview

## •Overview

- Objectives
- Evolution
- Airplanes
- ARS
- Engine
- FTT
- Sample Data
- Drag Results
- Parachute Drag
- Relief
- Wind Tunnel
- Drag Polars
- Constant CD
- Conclusions

- National Objectives
- Dryden Project Objectives
- Airplane Description
  - Tanker airplane, in-depth
- Flight Test Technique
- Sample Results
- Parachute Drag
- Drag Relief
- Comparison to Wind Tunnel Predictions
- Drag Polars
- Constant Drag Coefficient?
- Concluding Remarks

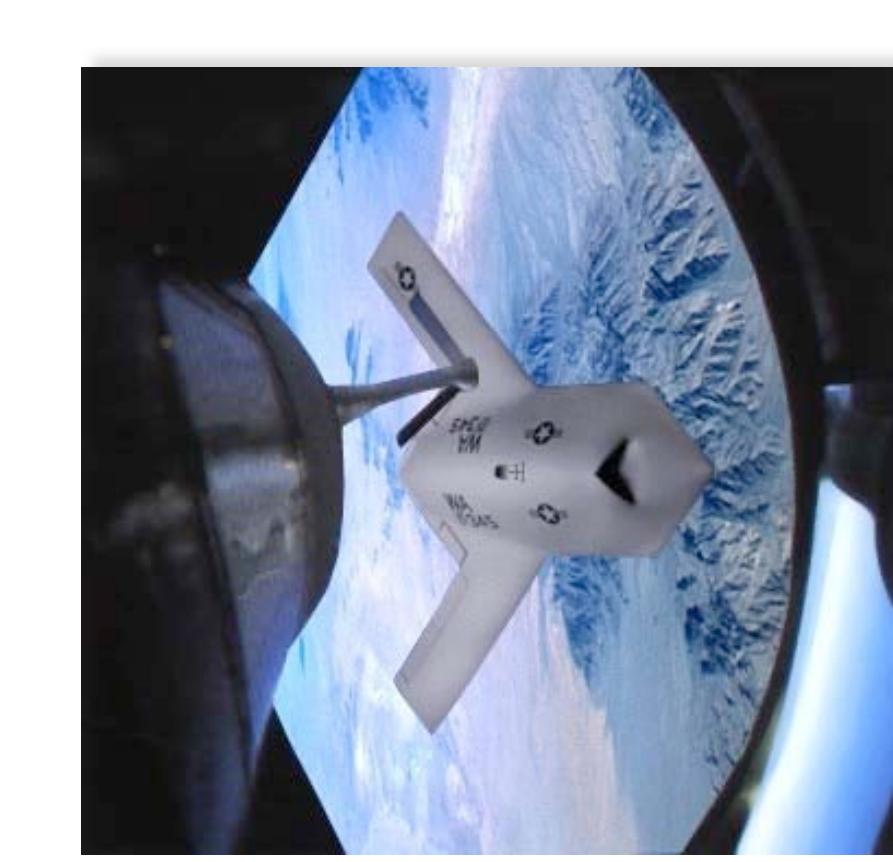

# National AAR Program Interest

## • Automated Aerial Refueling (AAR)

### • Objectives

### • Unmanned Aerial Vehicles

- Airplanes
  - Extends range
  - Shortens response for time critical targets
  - Maintains in-theater presence using fewer assets

### • Overview

- Evolution
- ARS
- Engine
- FTT
- Sample Data
- Drag Results
  - Parachute
  - Relief
  - Wind Tunnel
  - Drag Polars
  - Constant CD
- Conclusions

Dryden Flight Research Center

# National AAR Program Interest

- Overview

## • Objectives

- Evolution
- Airplanes
- ARS
- Engine
- FTT
- Sample Data
- Drag Results

## • Automated Aerial Refueling (AAR)

## • Manned Aircraft

- Facilitates adverse weather operations
- Improves fueling efficiency
- Enables multi-point simultaneous refueling

# Dryden AAR Project Objectives

•Overview

## •Objectives

### • Quantify Assumptions

- Drogue is assumed stable in the proximity of a stable receiver aircraft
- The drogue movement is repeatable and predictable

•Evolution

•Airplanes

•ARS

•Engine

•FTT

•Sample Data  
•Drag Results

•Paradropes

•Relief

•Wind Tunnel

•Drag Polars

•Constant CD

•Conclusions

### • Assess the Approach

- Can adequate flight test data be captured through optical instrumentation?
- Can individual model effects be superimposed to predict final drogue position?
- Are the flight test techniques sufficient to collect the desired data?
- Are the independent model parameters that affect drogue position observable through flight test?
- Sufficient signal to noise ratio, measurement error, parameter coupling, etc.

### • Reduce risk for UCAV AAR program through early flight test

- Deliver flight validated drogue model to the AAR community for future automatic control system development
- Correlate the drogue model to generic forebody influences
- Develop organic UAV instrumented tanker capability
- Develop expertise in electro-optic sensor technologies
- Applicability of the model to alternate refueling scenarios

# Dryden Optical Tracking

- Overview

## •Objectives

- Evolution
- Airplanes
- ARS
- Engine
- FTT
- Sample Data
- Drag Results
- Parachute
- Relief
- Wind Tunnel
- Drag Polars
- Constant CD
- Conclusions

Dryden Flight Research Center

# Dryden AAR Approach

• Overview

## • Objectives

• Evolution

• Airplanes

• ARS

• Engine

• FTT

• Sample Data

• Drag Results

• Parachute

• Relief

• Wind Tunnel

• Drag Polars

• Constant CD

• Conclusions

## • Phase 0

– Envelope expansion

• ARS on F/A-18A

• ARS operational envelope

• Flight test envelope

• 1st refueling from a  
“K” F/A-18A

– Drogue position vs. airspeed

– Pilot proficiency

## • Phase 1

– Isolate drogue influences

• Flight conditions

• Hose effects

• Tanker effects

• Receiver forebody effects

• Turbulence

– Two additional external tanks

## • Opportunity for piggy-back experiment

– Existing instrumentation available onboard from the AFF project

– Drag estimation for paratrogue and hose assembly

## 2003: Precision Engagements

# AAR Project Aircraft

- Overview
- Objectives
- Evolution
- Airplanes
  - NASA 845
    - Two-seater
    - Systems Research Testbed
    - Two forward-facing cameras
  - NASA 847
    - Single-seater
    - Tanker configuration w/ ARS
    - Thrust Instrumentation
    - Two aft-facing cameras
- ARS
- Engine
- FTT
- Sample Data
- Drag Results
- Parachute
- Relief
- Wind Tunnel
- Drag Polars
- Constant CD
- Conclusions
- Dual instrumentation
  - GPS receivers
  - Wireless modems
  - Multiple telemetry streams
- Additional NASA F/A-18s
  - Phase 0 chase support

- Airplanes
- ARS
- Engine
  - FTT
  - Sample Data
  - Drag Results
    - Parachute
    - Relief
    - Wind Tunnel
  - Drag Polars
  - Constant CD
  - Conclusions
- Engine
  - LPT discharge measuring plane
  - Combustor discharge
  - HPC discharge
  - HPC inlet
  - Engine inlet face
  - Free stream
  - Afterburner inlet
  - LPT rotor discharge
  - Exhaust nozzle inlet
  - Exhaust nozzle throat
  - Exhaust nozzle discharge

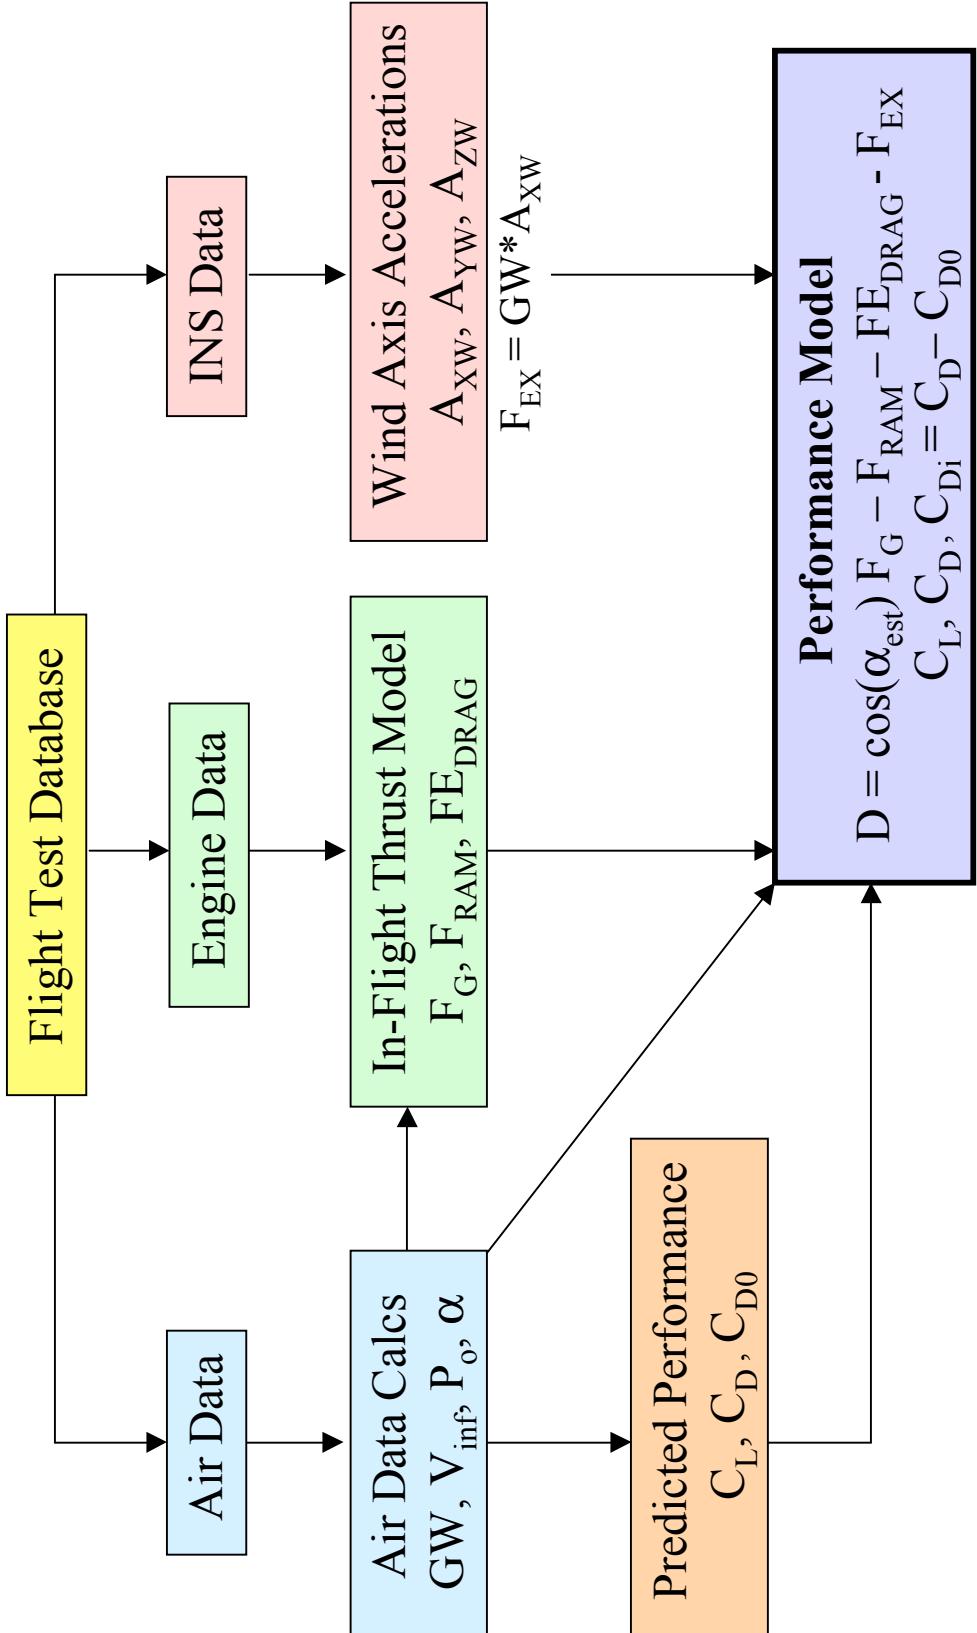

- F404 Engines – Instrumented for Thrust Determination
  - Flight-test, volumetric fuel-flow meter installed ( $P_{T_{558}}$ )
  - Turbine exit plane pressure rakes ( $P_{T_{558}}$ )
- Manufacturer's In-Flight Thrust Model used to calculate thrust

# Lift and Drag Analysis

- Overview
- Objectives
- Evolution

- Airplanes
  - ARS
  - Engine
  - FTT
- Sample Data
- Drag Results
- Parachute
- Relief
- Wind Tunnel
- Drag Polars
- Constant CD
- Conclusions

## • Test Point Description

- All-subsonic test points
- Stabilized paratrogue deployments and retractions
- Evolution

## • Data Uncertainty

- Drag calculation  $\sim 3$  to  $5\%$
- Trim angle of attack  $< 1\%$ 
  - Airplane weight
  - Drogue deployment

## • Data Quality

- Bias error is virtually eliminated by acquiring test data at back-to-back points during each flight, eliminating the effects of
  - Weight changes
  - Atmospheric effects
  - Calculation bias errors
- Auto-throttle control
- Variations in extended hose length  $< 2$  feet
  - Extensions and retractions
  - Receiver engagements
- Control room displays for evaluating data and maneuver quality

# Sample Drag Change

- Overview
- Objectives
- Evolution
- Airplanes
- ARS
- Engine
- FTT
- Sample Data
  - Drag Results
  - Parachute
  - Relief
  - Wind Tunnel
  - Drag Polars

# **Sample Real-Time Data**

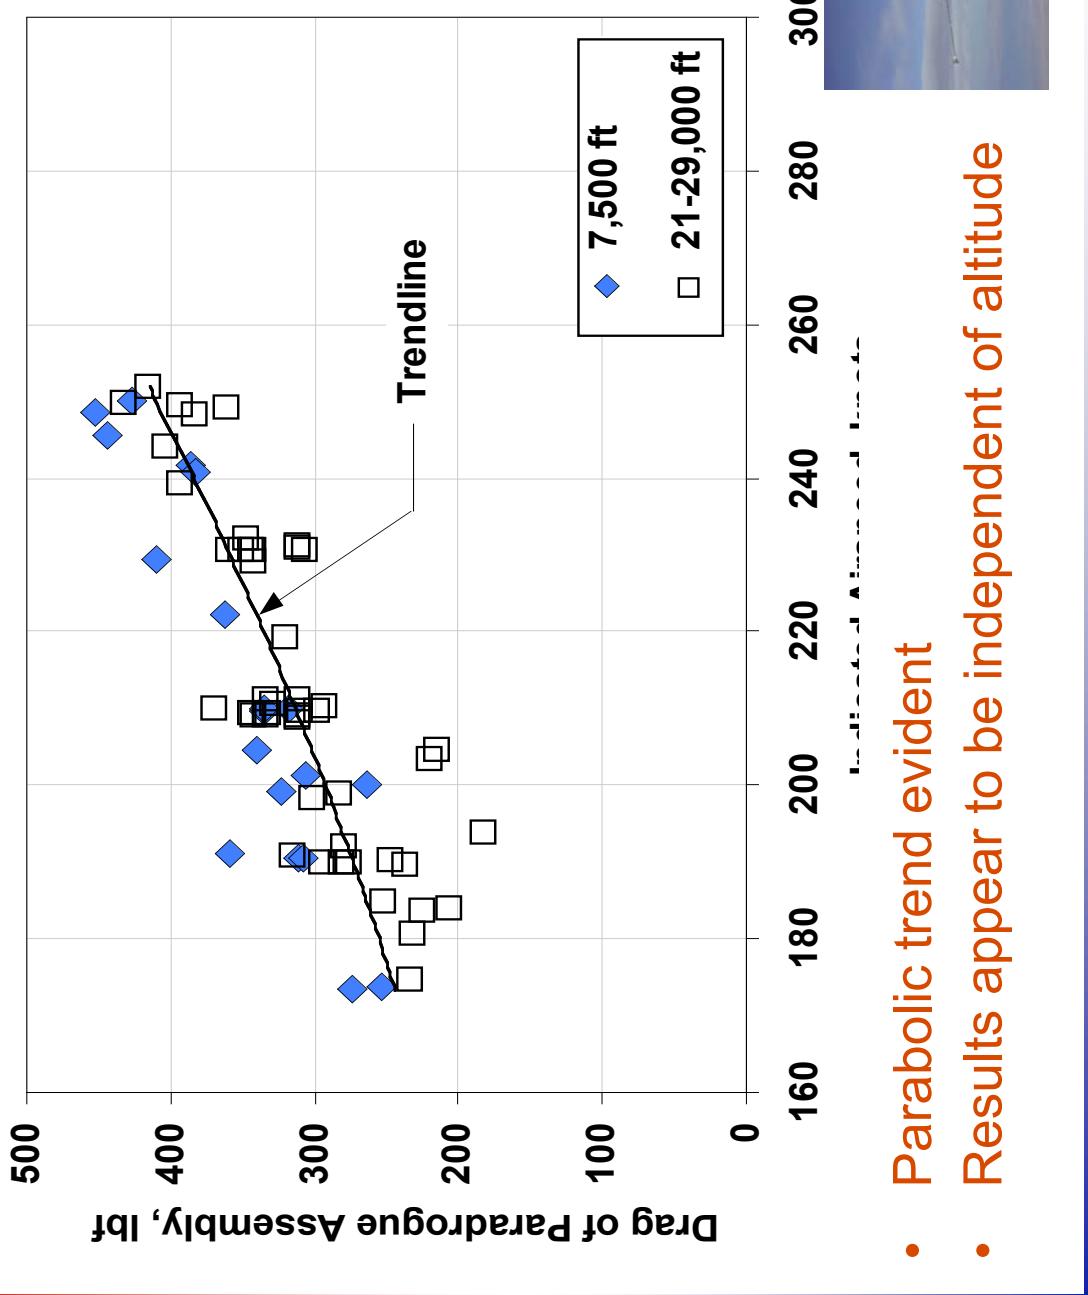

- Overview
- Objectives
- Evolution
- Airplanes
- ARS
- Engine
- FTT
- Sample Data
- Drag Result
- Parabogu
- Relief
- Wind Tunnel
- Drag Polar
- Constant
- Conclusions

# Parachute Drag Summary

- Overview
- Objectives
- Evolution
- Airplanes
- ARS
- Engine
- FTT
- Sample Data
- Drag Results
  - Parachute
  - Relief
  - Wind Tunnel
  - Drag Polars
  - Constant CD
- Conclusions

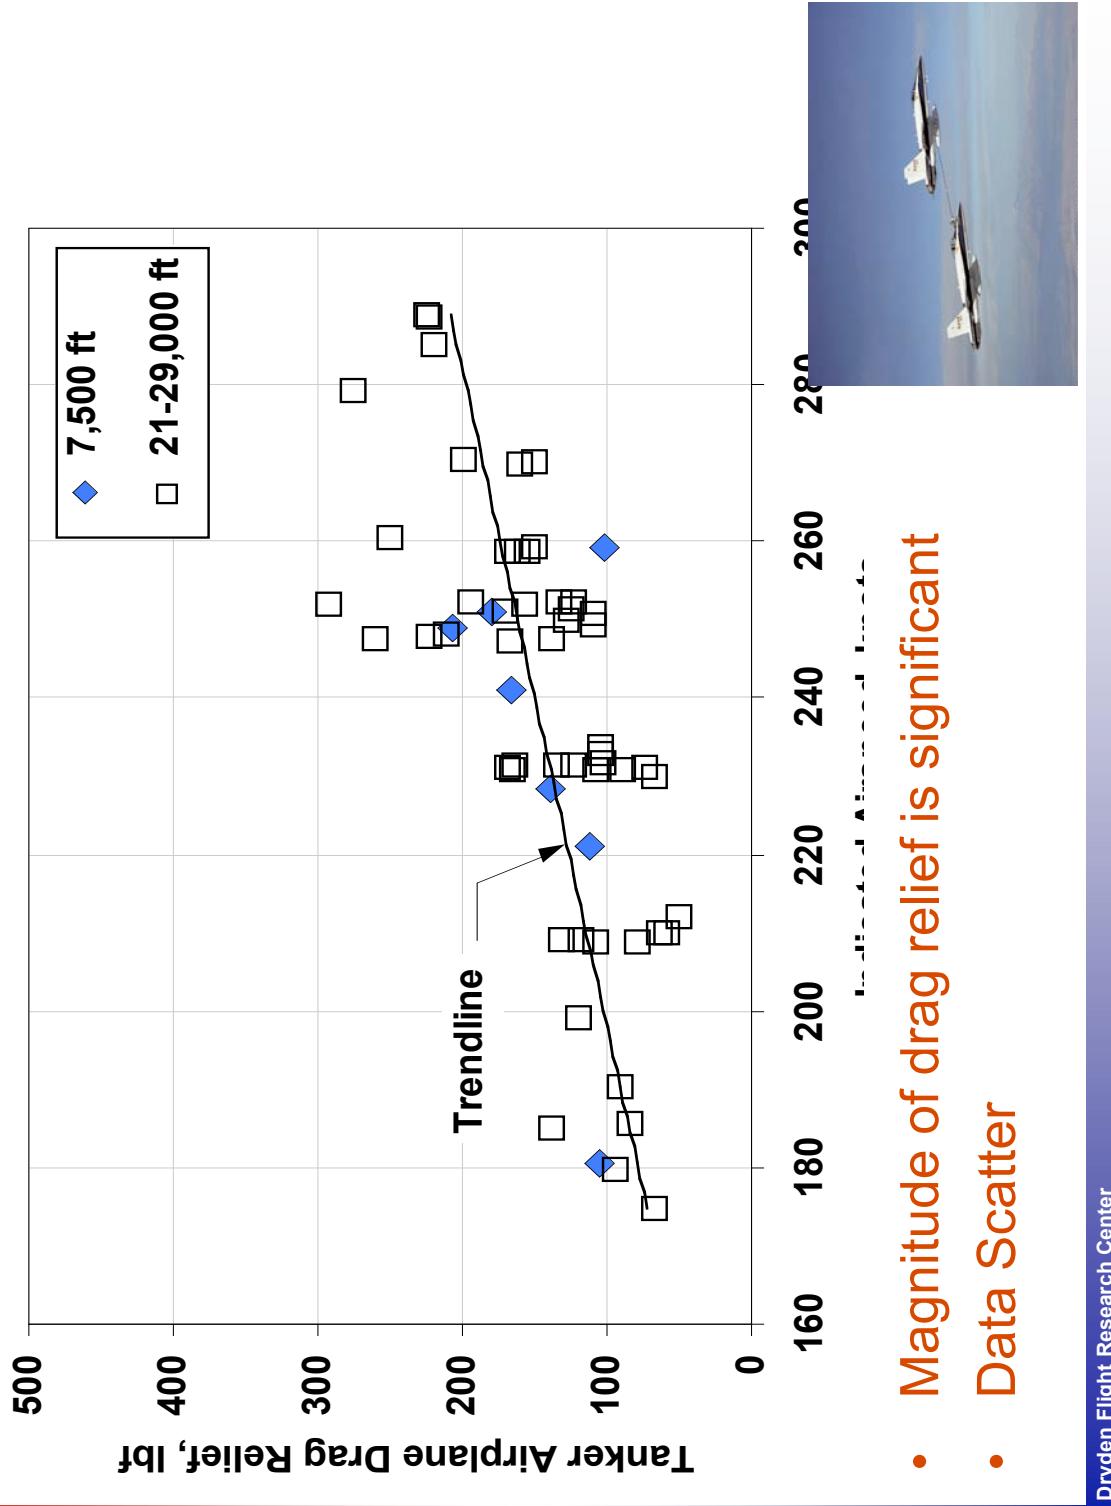

- Parabolic trend evident
- Results appear to be independent of altitude

# Receiver Engagements

- Overview
- Objectives
- Evolution
- Airplanes
- ARS
- Engine
- FTT
- Sample Data
- Drag Results
- Parachute
- Relief
- Wind Tunnel
- Drag Polars
- Constant CD
- Conclusions

- Magnitude of drag relief is significant
- Data Scatter

# Wind Tunnel Tests

- Overview
- Objectives
  - Baseline aerodynamic performance of the Navy '18' canopy for comparison purposes
  - Test various canopy designs for next-generation ARS canopy
    - Material type
    - Size, shape, cross-sectional area
  - Test various paratrogue mechanical designs
    - Struts
    - Linkages
    - Thread types
      - Used for attaching canopy to struts and maintaining shape while inflated
- Evolution
- Airplanes
- ARS
- Engine
- FTT
- Sample Data
- Paratrogue
- Relief
- Drag Results
  - Wind Tunnel
    - Drag Polars
    - Constant CD
    - Conclusions
  - Tunnel Characteristics
    - 3 Foot diameter test section
    - Maximum Airspeed = 200 kts
    - Blockage = Approximately 10%

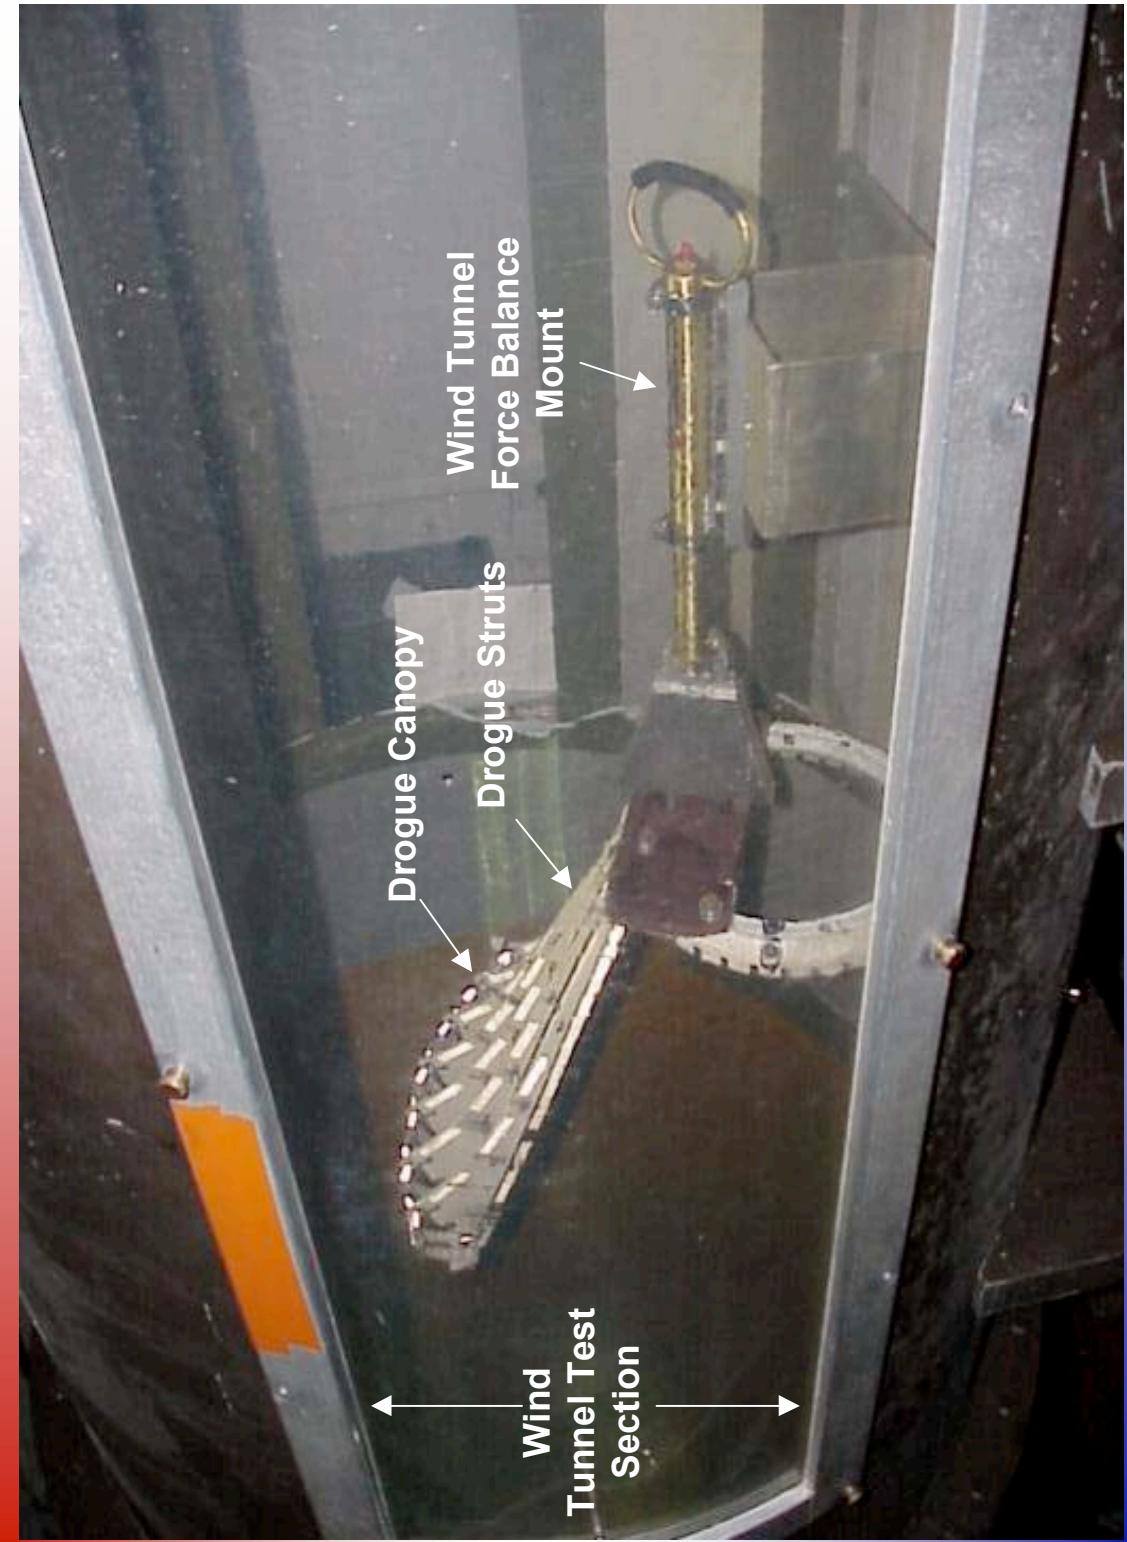

Dryden Flight Research Center

- Evolution
- Airplanes
- ARS
- Engine
- FTT
- Sample Data
- Drag Results
  - Parachute
  - Relief
  - Wind Tunnel
  - Drag Polars
  - Constant CD
  - Conclusions

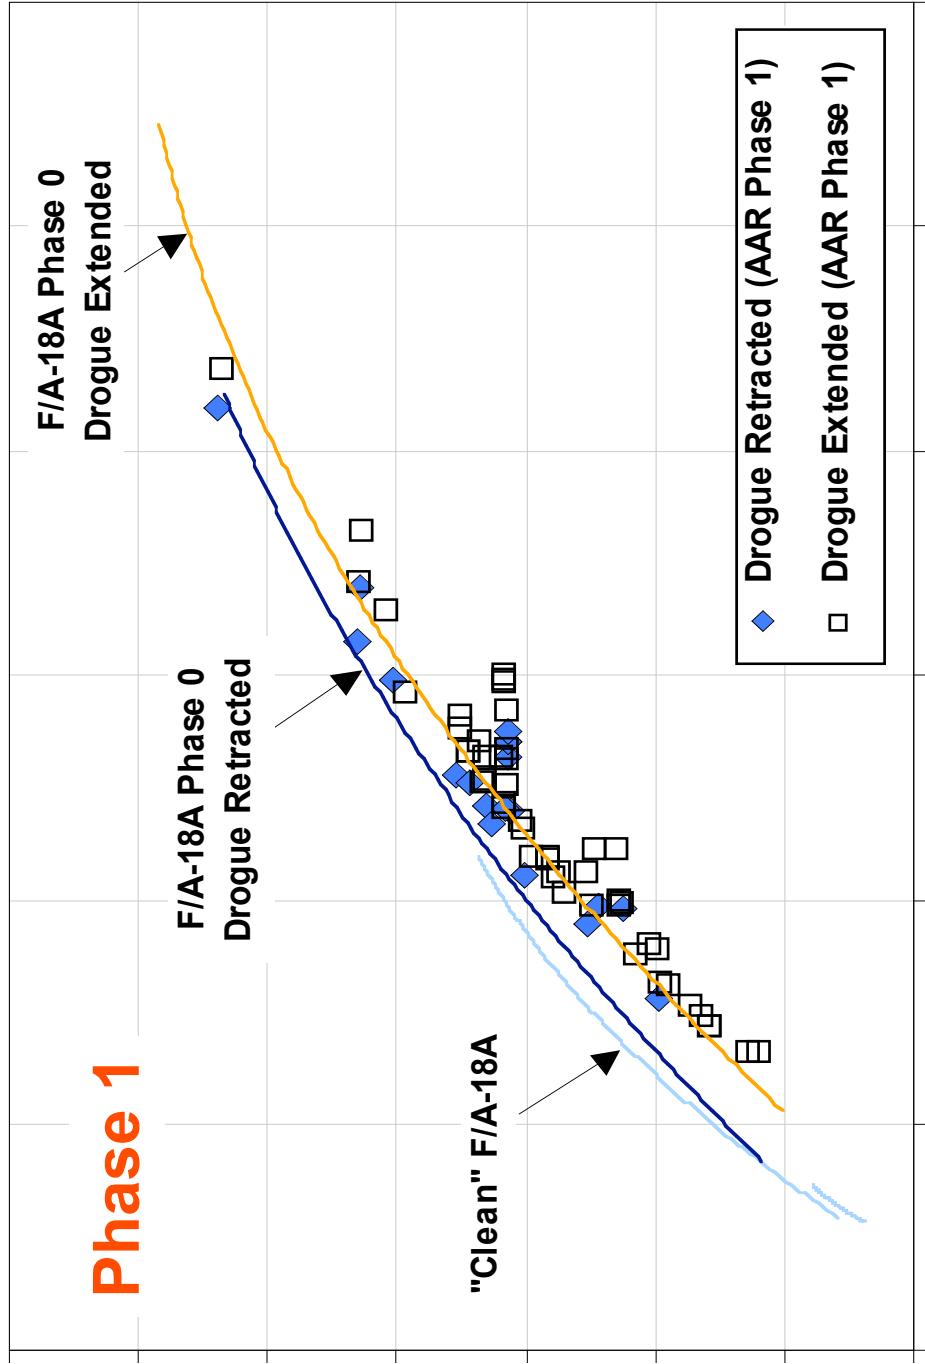

Dryden Flight Research Center

# Drag Polars

- Overview
- Objectives
- Evolution
- Airplanes
- ARS
- Engine
- FTT
- Sample Data
- Drag Results
  - Paratrogue
  - Relief
  - Wind Tunnel
- Drag Polars
  - Constant CD
  - Conclusions

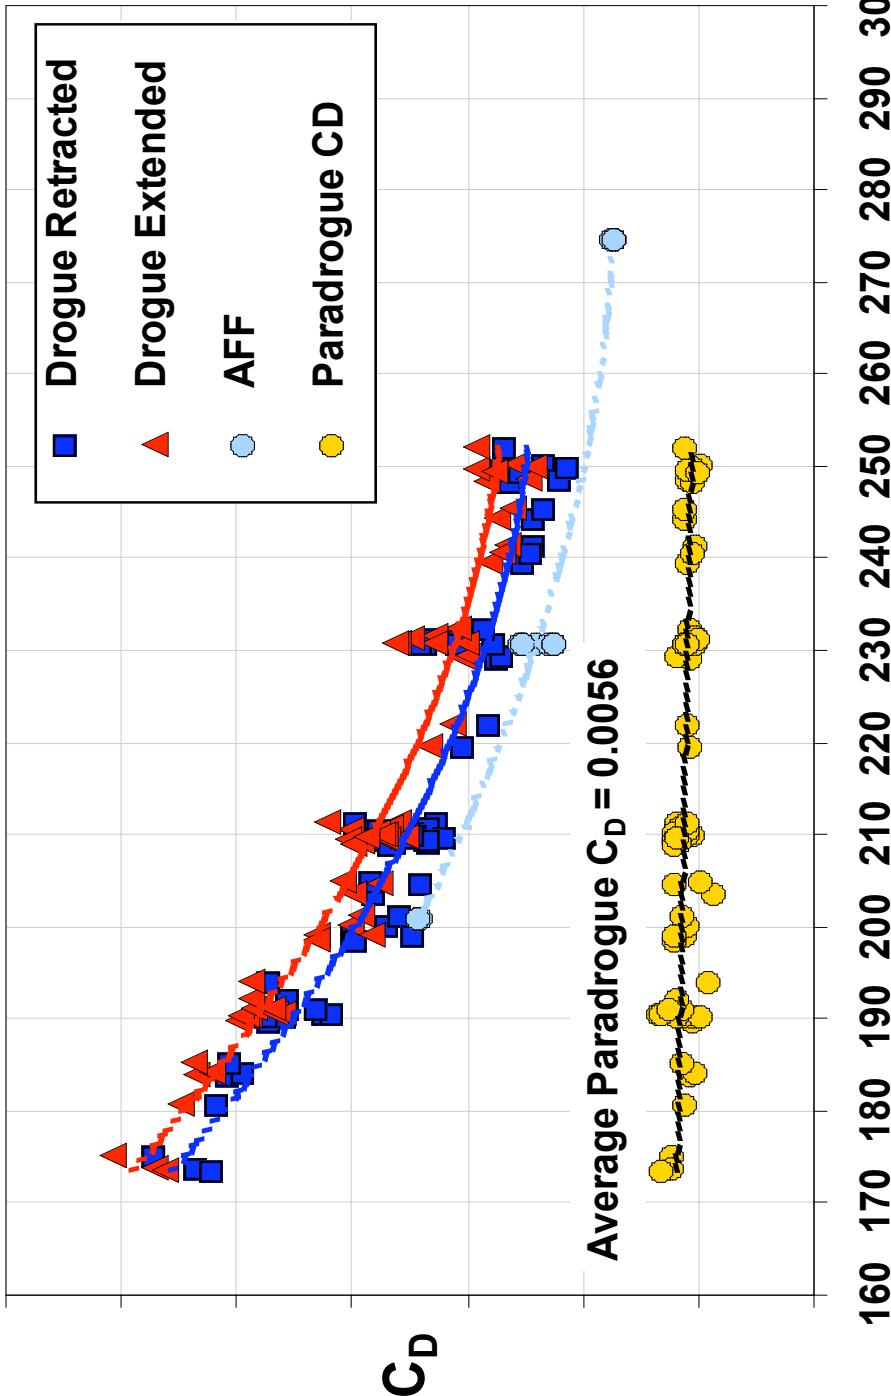

Dryden Flight Research Center

# Constant Drag Coefficient?

- Overview
- Objectives
- Evolution
- Airplanes
- ARS
- Engine
- FTT
- Sample Data
- Drag Results
  - Parachute
  - Relief
  - Wind Tunnel
  - Drag Polars
  - Constant  $C_D$
- Conclusions

# Conclusions

- Overview
- Objectives
- Evolution
- Airplanes
- ARS
- Engine
- FTT
- Sample Data
- Drag Results
- Parachute
- Relief
- Wind Tunnel
- Drag Polars
- Constant CD
- Conclusions

- First known measurement and publication of in-flight drag of an aerial refueling system
- Parachute drag
  - 200 lbf at 170 kias
  - 450 lbf at 250 kias
  - Good correlation with wind tunnel results
- Tanker drag relief during engagements
  - 35 lbf at 170 kias
  - 270 lbf at 250 kias
- “Constant” paratrogue  $C_D = 0.0056$ 
  - Based upon F/A-18 wing area
- All results compare favorably with clean F/A-18 data from the AFF project

Dryden Flight Research Center
